

He also took it upon himself to write a detailed planning document for the local government and community groups in Barraba who might be faced with the development of a billion dollar industry in their region. He described every facet from water, electricity, transport, education and training, what jobs could arise and how people of all ages might prepare for them, health and emergency services and so on. He met with representatives of community, with us, and with public servants, politicians and Ministers.

He did this whilst carrying out our planning needs, as well as his own taxation research degree.

KNOWLEDGE OF INDUSTRY AND OPPORTUNITY

It is clear to me that Kevin has been exceptionally trained and mentored in energy. He is not an engineer but possesses knowledge and skills attuned to that profession, to science, and to administration. He is a marketing talent able to prepare material and present it in multimedia formats before any audience of any size, for us from one person to hundreds.

I have met many of Kevin's colleagues and those who still mentor him and I am very aware of the extent of his network, which reaches from the local and state level of private and public sector, to national and international.

He can sell others on ideas and attract them into ventures and collaborative efforts just as he did for the Victorian power industry employees when he worked in the electricity industry.

ABILITY TO PERFORM THE REQUIREMENTS

Kevin meets his contractual employment obligations and exceeds them. He will add great value to an organisation engaged in promoting Australia's interest to the world.

Yours sincerely

Pacific Magnesium Corporation Ltd

Emmanuel Althaus

Chairman & Managing Director
